► Description

I-CON toilets are seamlessly welded 14-gauge type 304 stainless steel. Exposed surfaces have satin finishes except for the mirror-finished, integral, elongated seat. The fixture requires a wall opening and chase area for installation and maintenance. The toilet features a blowout flushing action with a self-draining flush rim.

► Performance

I-CON toilets meet or exceed ASME A112.19.3 and CSA B45.4 requirements. The toilets are designed to withstand a 5,000 lbs. load without permanent deflection and damage, and the trap allows for a 2-1/8" ball to pass. A 1" supply line with a minimum of 25 PSI flow pressure is required. When used with an I-CON MOMENTUM® flush valve, the fixture is capable of flushing as low as 1.0 gpf. If used with other flush valves, the fixture is capable of flushing as low as 1.28 gpf.

► Recommended I-CON Intelligent Control System

The system includes low voltage, water-resistant controllers; waterproof stainless-steel actuators; direct-acting solenoid valves with no diaphragms; and an ASSE-certified flush valve proven to be more reliable and less expensive to maintain than traditional valves. When used with the I-CON MOMENTUM® flush valve, the unit is capable of flushing 1.0 gpf, exceeding all HET requirements. The I-CON System can be configured as a standalone or communicating system linked to our touchscreen PC technology. Both configurations offer the capability to stop flooding and abuse while managing toilet flushes per hour per fixture, which reduces water usage and sewer costs.
