

GENERAL INFORMATION

- The time is displayed in the top left
- The battery level is displayed at the top right
- The volume up and down keys control the screen brightness
- Hold the power button down to power off or restart the device

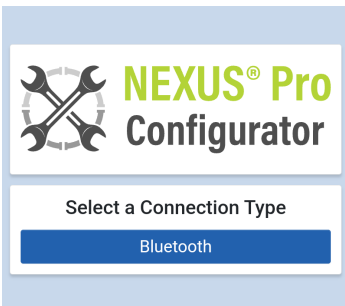

Step 1

Plug your NEXUS® Pro Configurator daughterboard into the NEXUS® Pro controller.

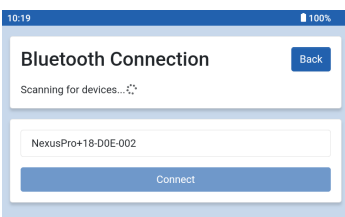

Step 2

From the NEXUS® Pro Configurator tablet, select your connection type.

Step 3

NEXUS® Pro Configurator will search for an available device and display it. Select the device and connect.

Step 4

The device configuration page will open. Available ports are displayed on the left. Select one to adjust its settings. Activation buttons are on the right; select one to activate the associated port. If the device is equipped with Pressure and Temperature monitoring, they will be displayed along the top, select one to adjust its settings. If you would like to edit the settings of all ports of the same type, select "Edit by Type" located at the top right of the port settings, then select the port type from the "Type" dropdown.

Step 5

Scroll to the bottom of the page to see available configurable settings.
