

NEXUS® Pro+ Port Swap Monitoring Kit

The Port Swap Monitoring Kit delivers instant, reliable detection by combining real-time pressure monitoring with seamless integration into the NEXUS Pro+ controller. Designed for durability and accuracy, it helps facility teams identify potential issues early—before they turn into costly maintenance problems.

NEXUS® Pro+ Port Swap Monitoring Kit

Product Specifications

- Software-enabled Port Swap Monitoring with configurable pressure and output ports.
- Real-time detection of port swap errors with automatic system shutdown.
- Color-coded LED indicators for status and fault alerts.
- Quick installation with standard flush valve compatibility.
- Color-coded wiring + pressure transducer connection for easy setup.
- Enhances system safety and operational reliability.
